

ABSTRACT

An insulating glazing panel including at least two glass panes separated by a gas space. A spacer serves to keep the two glass panes apart and having at least one approximately flat strip fitted at least partly around the perimeter of the glazing panel and fixed by adhesive bonding using a fastener. The strip is fitted substantially toward the interior of the panel set back with respect to at least one end face of a glass pane and is adhesively bonded against at least one internal face of a glass pane.
